## Pro Modular Microwave Receiver Kits

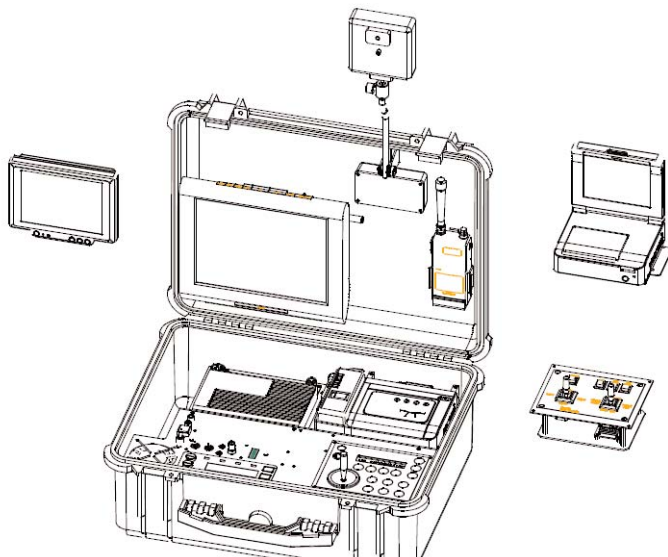

NSM Surveillance offers the latest in analog L&S-Band (Wideband) self-contained receiver-viewer-recorder units.

Step up to superior performance with NSM Surveillance's newest addition to our line of Microwave Receiver/Recorder Kits.

The Pro Modular Receiver Kit system incorporates the latest microwave receiver brick with our soft touch lighted display panel. Simple menus enable band, frequency and audio sub selection, as well as provide relative signal strength.

Like our older version, the system is tri-powered by either a standard A/C cord, a DC car-cord, or via internal gel cells. The auto charger maintains on board batteries and a battery status indicator is provided.

In addition to routing video and audio more effectively, an internal distribution amp is provided. Since the system is modular, buy what you can afford now and simply plug in the upgrades as they are procured at a later date(s).

*GUD1000 & 1200 with  
built-in 4" LCD monitor*

*Sony-Z with external  
6.4" LCD monitor*
